

GREENVIEW®

MULTI-PURPOSE & STARTER FERTILIZER 13-13-13

EXCELLENT FOR USE ON TREES,
SHRUBS, VEGETABLES, FLOWERS,
AND ORNAMENTAL GARDENS

THIS BAG COVERS UP TO 17,368 SQ. FT. WHEN USED AS A STARTER FERTILIZER FOR TURF.

NET WT. 33 LBS. (14.97 Kg)

QUALITY RESULTS

The general purpose formula of GreenView 13-13-13 contains important nutrients to feed most of the plants you grow. Use this product to feed your vegetable gardens and flower beds, trees and shrubs, and as a starter fertilizer when you are seeding new lawns.

USE INSTRUCTIONS

FOR ANNUAL FLOWERS

Work fertilizer into soil at the rate of 1 1/4 lbs. (2 1/2 cups) per 100 sq. ft. (10 ft. by 10 ft. area) during final preparation of plant beds. During the growing season, make additional applications at the rate of 1/2 lb. (1 1/4 cups) per 100 sq. ft. every eight weeks.

FOR ESTABLISHED PERENNIAL FLOWERS AND SHRUBS

Apply evenly in early spring at the rate of 1 1/4 lbs. (2 1/2 cups) per 100 sq. ft. Make supplemental applications of 1/2 lb. (1 1/4 cups) per 100 sq. ft. every six weeks. Stop feeding one month before frost.

FOR BULBS AND TUBES - BED PLANTING

Work fertilizer into topsoil at rate of 1 1/2 lbs. (3 cups) per 100 sq. ft. of bed before planting.

FOR ROW PLANTING

Apply fertilizer in trench or row at the rate of 1 lb. per 100 linear feet. Mix fertilizer in soil at bottom of trench and cover with approximately one-half inch of soil before planting bulbs.

FOR VEGETABLE GARDENS

Before turning soil, broadcast 1 1/4 lbs. (2 1/2 cups) of fertilizer per 100 sq. ft. (10 ft. by 10 ft.) or after turning, work 1 1/4 lbs. of fertilizer per 100 sq. ft. into soil to a depth of 4 to 5 inches before planting. For vegetables planted in rows, add 1/2 lb. per 100 sq. ft. of row in trenches two inches deeper than the seed or plant and two inches to the side of the row. Long growing crops (tomatoes, corn, carrots, cabbage) should also be side-dressed with 1/2 lb. fertilizer per 100 ft. of row at six week intervals.

FOR NEW LAWNS AS A STARTER FERTILIZER

Apply to the seedbed at the rate of 5.3 lbs. per 1,000 sq. ft. For best results apply with a spreader and work into soil before seeding. For turf applications, bag covers up to 6,225 sq. ft.

Feed again with a lawn maintenance fertilizer when grass is at least 3 inches high.

Do not apply near water, storm drains or drainage ditches. Do not apply if heavy rain is expected. Apply this product to your lawn or garden, and sweep any product that lands on the driveway, sidewalk, or street back on to your lawn or garden.

Check with your local Cooperative Extension Agency to obtain specific information on local turf best management practices. Check with your county or city government to see if there are local regulations for fertilizer use.

Do not apply to frozen turf.

In Florida:

A soil test is recommended prior to planting grass.

Do not apply fertilizer prior to planting grass.

For seeded, plugged or sprigged grasses, wait until there is a uniform turf cover before application (the length of time required to achieve this will vary based on the time of year, environmental conditions and location in state). For sodded and new grass apply at the rate of 1.9 lbs per 1,000 sq.ft. Application of a nitrogen based fertilizer with zero phosphate is recommended after 30 days to ensure continuing growth. Do not exceed 0.25lb P₂O₅ per application or 0.5lb P₂O₅ per year. Applications should be made during the summer, spring, or fall seasons. No more than 2 applications annually.

In Maryland:

Apply at the rate of 1.9 lbs per 1,000 sq.ft. This bag covers up to 17,368 square feet. Do not exceed 0.25 lb P₂O₅ per application or 0.50 lbs P₂O₅ per year.

Not for use on established lawns. Apply as a starter fertilizer only during the first growing season.

Note: Supplement applications of lawn fertilizer are needed to achieve a minimum 0.9 pound of nitrogen per 1,000 sq.ft.

KEEP OUT OF REACH OF CHILDREN
